

Schema DMHT – Trial-Ro

Inputs from historical data

- INSP database
- DSP database
- free databases
- close databases

DMHT
(helps decision-makers)
It requires DPT

Outputs

- query mechanisms for other components for retrieving epidemiological data used by other tools in the STAMINA platform

EWS tool
ENGAGE

It has no actors in Romania

This is the only text about DMHT and was found in D5.1_v3

Input data for PALMS is taken from publicly available sources (such as Public Health England/ Spain National Health Survey, World Health Organisation, International Severe Acute Respiratory and Emerging Infection Consortium (ISARIC) and the scientific literature). PALMS will also interoperate with DMHT in order to receive up-to-date input data from the STAMINA data sources. Output data will be reported as CSV files and can be visualised in the COP tool.
